

Algo to Code

1. Event Name

Algo to Code (Competitive Programming)

2. Objective

To test and improve participants algorithmic thinking, logical reasoning, and coding efficiency under time constraints.

3. Overview

Algo to Code is an inter-college competitive programming contest where PMEC students solve algorithmic problems using offline coding environments.

4. Format & Duration

- **Duration:** 1 Hour
- **Mode:** Individual (Solo)

5. Participation Details

- **Participation Type:** Solo
- **Eligibility:** Undergraduate students (PMEC and other colleges)
- **Number of Problems:** 5 (Easy to Hard)

6. Evaluation Method

All teams submit their solutions at the same time, and all codes are evaluated under identical system conditions.

- **Number of Problems Solved:** Teams solving more problems are ranked higher. A problem is counted only if all test cases are passed.

- **Execution Performance:** If teams solve the same number of problems, ranking is decided based on relative execution performance of accepted solutions, using a language-neutral comparison to avoid bias.

- **Penalty for Incorrect Solutions:** In case of a further tie, fixed penalties are applied for incorrect submissions.

(Submission time is not considered. This method ensures a fair, objective, and language-independent evaluation.)

7. Facilities & Requirements

- Computer systems
- Pre-installed compilers/IDEs
- Power supply

8. Rules & Guidelines

- Internet, mobile phones, and hotspots are strictly prohibited
- Offline coding only
- Any unfair means will lead to disqualification

9. Registration Fee

- ₹30 per participant

10. Prize Pool Distribution

The total prize pool for Algorithm to Code is ₹2,000 .
